

IPS Tablet Hardware Requirements

Tablets with unsupported operating systems, less processing power, RAM, and/or storage capacity than specified above will not run the software effectively. Edmunds GovTech reserves the right not to install the software on systems that do not meet the requirements.

Please contact Edmunds GovTech for hardware recommendations prior to purchasing.

The IPS Tablet application requires a web server running IIS 7 or greater. This server must have a static IP address or dynamic DNS configured and have internal access to the server where IPS's databases reside.

Processor	1 GHz Quad-Core (Minimum)
Operating System	Android 6.0 (Minimum)
Memory	1.5 GB (Minimum)
Local Storage	16 GB (Minimum)
Internet Access	4G LTE (Minimum)

Recommended Devices

- Samsung Galaxy Tab s5e
- Samsung Galaxy Tab A7
- Samsung Galaxy Tab S7
- Samsung Galaxy Tab S6 Lite
- Samsung Galaxy Tab S6
- Samsung Chromebook plus (LTE)

Notes:

The Field inspection application is lightweight and will run sufficiently on most modern Android tablets (purchased in the last 3 years).

However, formatting problems could arise if you are using an exceedingly old device with an uncommon screen size. If you have any questions on compatibility of a certain device, please contact Edmunds GovTech.

Sign-off

- Yes, I certify that all the machines are compatible with the minimum tablet requirements
- Yes, the web server is configured with a static IP address or dynamic DNS
- Yes, all tablets have the latest updates and configured for cell service
